

We, NCC International LLC took AEC Budget, an estimation software solution for construction industry and have been working on it. I appreciate the solution that is making our job easier, accurate and integrated than ever before. The ease of use and the power of the solution made us to reduce tendering time by 50% and is extremely helpful and amazing from arriving costs from first principles to integrating to ERPs, CAD Models, MS Project and Primavera. This web based solution allows multiple users to work on the same project without compromising on data integrity. The customized reports are very useful for analysis and taking right decisions.

I wish AEC a big success and to continue to help construction industry to address the deficiencies being suffered with lack of proper analytical and automation tools.
